

Matthew Rakay

Issue: Add a pull-request checklist for arcade contributions #31

Issue URL: <https://github.com/AmalChUm/students-arcade/issues/31>

Labels/difficulty

Parent repo URL: <https://github.com/AmalChUm/students-arcade>

Fork URL: <https://github.com/Msettlerak/students-arcade>

local file: students-arcade

Branch URL: <https://github.com/Msettlerak/students-arcade/tree/issue-31-pull-request-checklist>

Commit URL: <https://github.com/AmalChUm/students-arcade/compare/main...Msettlerak:students-arcade:issue-31-pull-request-checklist>

Verification output:

```
msettlerak@matt MINGW64 ~/Workspace/Sft-Con/students-arcade (issue-31-pull-request-checklist)
```

```
$ python main.py
```

## Pull-Request Checklist

### 1. Contribution Basics
- [ ] Worked in a dedicated feature branch using the recommended format.
- [ ] Changes are tightly focused on this specific issue.
- [ ] Preserved the MIT license and existing attribution.

### 2. Plugin Structure & Requirements
- [ ] File Location: Placed the plugin file inside the `plugins/` directory.
- [ ] Filename: Verified the filename is unique.
- [ ] Metadata: Explicitly defined `AUTHOR` and `APP_NAME` variables.
- [ ] Execution Logic: Defined the `run()` function to return or print a
readable result.
- [ ] Standard Library: Used only the Python standard library (unless
otherwise approved).
- [ ] Import Guard: Avoided running unintended code when the module is
imported.

### 3. Verification & Security
- [ ] Execution Check: Verified the result by running `python main.py`
(avoided modifying `main.py` unless explicitly required).
- [ ] No-Credentials Check: Confirmed that no credentials, tokens, private
information, or unnecessary dependencies are included.
```

4. Pull-Request Description

- [] Linked this issue (#31) in the pull-request description.
- [] Provided a clear explanation of the verification steps performed.

AI-use log

Interaction 1

Date: October 6, 2026

Assistant: AI Assistant

Purpose: Create a reusable pull-request checklist template for Issue #31.

Prompt or summary: Requested a Markdown template for a pull-request checklist, asked how to create and save a `.md` file structure using GitHub Desktop, and asked if the checklist needed updates to match the documentation-task requirements.

Suggestion accepted

What did the AI suggest?

The initial Markdown template layout, the exact file path location (`.github/pull_request_template.md`), and step-by-step instructions on making focused sequential commits using GitHub Desktop.

Why did I accept it?

It directly satisfied the acceptance criteria in the issue description, met the requirement for multiple descriptive commits, and mapped perfectly to GitHub Desktop's layout.

What evidence supported the decision?

GitHub Desktop tracked the file in the correct location and allowed the creation of focused commits with the recommended messages.

Suggestion revised

What did the AI suggest?

The AI suggested adding specific plugin requirements to the checklist (like checking for the `plugins/` directory, `AUTHOR`, and `APP_NAME` variables).

What did I change?

I updated the template from a general checklist to one that explicitly details these specific repository-level requirements.

Why did I change it?

The assignment documentation guidelines (Step 14) explicitly mandate checking filenames and plugin metadata against actual repository behavior to receive full credit for documentation tasks.

Suggestion rejected

What did the AI suggest?

Suggested creating files outside of desktop

Why did it not fit the repository or issue?

I was working out of Desktop, not git bash

47. A short reflection

Reflecting on this project, it was a great learning experience. I started not really understanding where to start. With a little help from AI, I found myself really flowing through the project with little assistance. Especially recalling useful lessons from previous weeks, including git bash, desktop, forks, push, and pull requests. I did run into a few snags but was able to navigate through. I learned that file location is very important, and AI can lead you into mistakes if you are not careful.
